Alumni support for the Leading Edge of Earth and Planetary Science Lecture Series (LEEPs)

Won't you donate to help keep this lecture series alive?

The LEEPs lecture series was started in 1988. The goal of the lecture series is to bring nationally and internationally known scientists and others to the University of North Dakota so that our students, our faculty, and the public can meet them, and find out what they are doing and thinking. The emphasis is on researchers at the cutting edge of science and engineering. Visiting lecturers are affiliated with large universities, small colleges, oil companies and other corporations, state or national geological surveys, and other entities. Lectures cover a wide range of topics, including academic science, applied engineering, and environmental issues of current significance. A list of some recent speakers is on the next few pages of this newsletter.

We spend between $5000 and $6000 on LEEP each year. Major supporters have been friends and alumni of our department, the UND Energy and Environmental Research Center, the UND Office of Research & Program Development, and the North Dakota EPSCoR Program. Other supporters include The Mineralogical Society of America, The American Association of Petroleum Geologists, The Association of Women Geoscientists, The National Water Well Association, Sigma Xi, The Sierra Club, The Paleontological Society, and the United States Geological Survey.

But these sources of funds are either drying up or becoming much harder to get. We are concerned that there won't be a LEEP lecture series next year. Some help has come through funds donated in the name of Mary Jo Klosterman by one of our alumni, and by matching funds provided by Exxon. But we still find ourselves $3000 short for next year and the years after.

Please help us keep the LEEP lecture series going. Endowments, with or without matching funds, would help us plan for the future. But, if you can't afford that, one-time donations would be gladly accepted.
